and the obedient responses of the muscles, or the complaints of any diseased organs inform the consciousness of their condition.

Fourth. The cerebro-spinal nerves, with their dual functions of motion and sensation, provoke the muscles to act, and report faithfully back to the brain the sensations which all such actions have produced.

Fifth. The pneumogastric and spinal accessory nerves, together with the whole array of the sympathetic system, pierce into the dark and hidden places removed from the exercise of the will; but still they cannot escape from the duty of reporting their condition upon the little fibres of the cerebro-spinal system with which they are connected, and this again sounds the alarm in the tones of pain through the cerebral hemispheres, where it reports itself, with the accompanying demand upon the physician's art to restore the equilibrium which any suffering organ has lost.

The nervous fluid is compared by many authoritative writers to ELECTRIC ACTION. The author makes this claim, and thereupon bases her system of Electro-Therapeutics. Moreover, claiming that the nervous system makes a correct record of all diseases, and all the conditions under which the organism is or may be laboring, she asserts that it can locate and disclose the *exact* extent of the degeneration which has beset hidden organs, internal tissues, or tumors imbedded in secret places; making a chart upon the brain, which the author's discovery of Electro-Cranial Diagnosis can delineate if properly addressed by intelligent and informed practitioners.
