deep fascia extending beyond and above the peritoneum, yet a part of such, produce a peculiarly noticeable distressed tone of depression in the voice, and the unmistakable lassitude in both sexes, when any displaeement or pressure exists in the genito-urinary organs; hence the importance in these organs for health, and that the ligaments and muscles be firm and unrelaxed.

Many of the weakening diffieulties whieh drain the vitality of both sexes are of the same nature. and must be treated in similar manner. For instance, leucorrhœa in the female and seminal emissions from the male bear so strong an analogy they should meet with the same constitutional treatments in both sexes.
