CEREBRO-SPINAL SYSTEM OF MAN.

FIG. 4.

1. Cerebrum.
2. Cerebellum.
3. 3. 3. } Spinal cord and nerves.
4. 4. } Brachial nerves.
5. 5. } Sacral nerves.

The spinal cord is cylindrical, and running from one end of the spinal canal to the other, and connected at its anterior extremity with the ganglia of the brain, it is divided, by an anterior and posterior median fissure, into two lateral halves, which still remain connected with each other by a central mass or commissure. Its inner portions are occupied by a gray matter, which forms a continuous ganglionic chain, running from one extremity of the cord to the other; its outer portions are composed of white substance, the filaments of which run for the most part in a longitudinal direction, connecting the different parts of the
