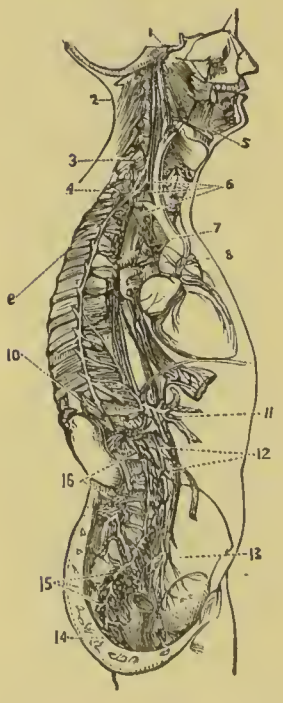
thetic, ganglionic, and cerebro-spinal systems—in fact, the totality of forces and nervous intelligences making man—has rendered her discovery of cranial diagnosis but a translation of causes, whose effects the physiologists have often attested but never heretofore explained. However, the author cannot refrain from again expressing her gratitude that Dalton and others have rendered the path so clear by their delineation of revealed nature in their exhaustive works.

SYMPATHETIC NERVE, ACCORDING TO GRAY'S ANATOMY

FIG. 5—No. 2.



1. Carotid plexus.
2. Superior cervical ganglion.
3. Middle cervical ganglion.
4. Inferior cervical ganglion.
5. Pharyngeal branches.
6. Cardiac branches.
7. Deep cardiac plexus.
8. Superficial cardiac plexus.
9. Dorsal ganglia.
10. Dorsal ganglia.
11. Solar plexus.
12. Aortic plexus.
13. Hypogastric plexus.
14. Inferior hypogastric.
15. Sacral ganglia.
16. Lumbar ganglia.
