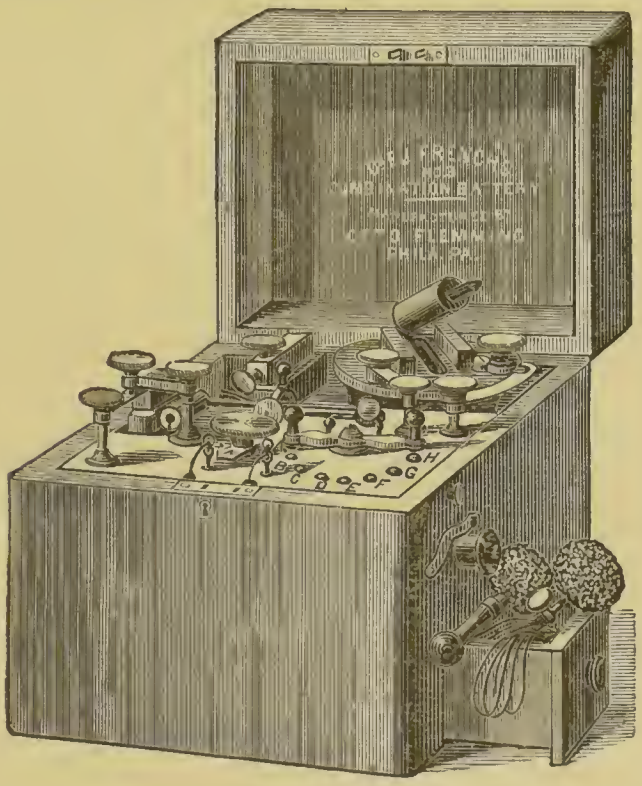
and combined metals in the helices, arranged to produce twenty-eight different grades of electrical currents, as follows: A–B, A–C, A–D, A–E, A–F, A–G, A–H, B–C, B–D, B–E, B–F, B–G, B–H, C–D, C–E, C–F, C–G, C–H, D–E, D–F, D–G, D–H, E–F, E–G, E–H, F–G, F–H, and G–H.

Dr. Elizabeth J. French's Combination Battery, No. 3, arranged to produce twenty-eight different grades of current, but much more complete



than No. 2, and provided, besides, with the rapid vibrator, with Flemming's slow interrupting rheotome, and commutator, or pole-changer, etc.
