ten minutes, then change to A–D for fifteen. The foot-bath may be substituted for No. 7 electrode.

GENERAL TONIC.

Substitute E–G for A–D and D–H for A–H, and manipulate as directed for general treatment.

SCROFULOSIS.

This is to be corrected by a persistent daily treatment with the "blood-current" B–C.

First. Round electrode between the hands in B, and No. 4 electrode over stomach in C, twenty minutes.

Second. No. 6 electrode over stomach in C, No. 7 electrode under the ankles or feet in D, as strong as can be borne, twenty minutes. Use G–H current in the same manner alternate days. The vapor-bath (see directions) should be used frequently. All impurities of the blood may be benefited in a similar way.

SUSPENDED ANIMATION.

No. 1 electrode at base of brain in A (wet the hair thoroughly, as it is a non-conductor when dry), No. 6 electrode under the feet or the calves of legs in D. While the current is running, the cylinder is to be frequently and at regular intervals quickly drawn out and returned, giving repeated vibrations in this way, if the battery has no vibrator. When response is obtained, place No. 6 electrode across stomach in B, and No. 4 electrode at base of spine in D. Also F–G in the same manner. Afterwards elsewhere, if especially indicated. The time of the
