New Path in Electro-Therapeutics.

BY ELIZABETH J. FRENCH,

Author of a complete manual of "Electro-Therapeutics," "Alcohol, an Enemy," "Family Guide," etc.

OPINIONS OF THE PRESS.

"A very neat little volume, entitled a 'New Path in Electrical Therapeutics,' by Elizabeth J. French, and handsomely printed and published by J. B. Lippincott Company, Philadelphia. Its object is to describe and vindicate Mrs. French's great discovery of electrical cranial diagnosis, and a scientific application of nine different currents of electricity to the cure of disease. The style is clear, concise, and easy, showing that the heart of the authoress is in the subject, and the authorities cited in support of her position are respectable and numerous."—*The Press, Philadelphia.*

"The book is written in an easy, graceful style, and contains much of historical and scientific information upon the subject of Therapeutics. It is also valuable as a curiosity of scientific investigation."—*The Commonwealth, Boston.*

"The work is written in an easy and comprehensive style, and is really curious and interesting."—*Philadelphia Inquirer.*

"The author evidently has a very clear idea of her subject, and though her theory is rather astounding, still, being supported by such an eminent authority as Dr. Ferrier, and by a successful practice in cases described in the volume before us, can hardly fail to attract attention from the best scientific minds."—*The Times and Messenger, New York.*

"The work is void of technicalities, and gives a very lucid review of Anatomy, Hygiene, and Historical Medicine."—*The Ohio Democrat.*

"The book contains a vast amount of very useful information on the subject of health, and should be read by all, and have a place in every family library"—*Temperance Blessing, Philadelphia.*

"Dr. Ferrier, the London scientist, is somewhat late in making public his supposition that 'disease is mapped out on the brain, and may be diagnosed.' In a recent work on Electrical Therapeutics, by Elizabeth J. French, the scientific application of electricity reveals a new and wonderful phase in anthropology. 'It is many years since I discovered the human brain is a chart upon which may be found delineated all the organs of the human body, and a record of their exact conditions.' Our American lady should be sustained, and the laurels should be hers."—*Fort Wayne Sentinel.*

"Those who sneer at the idea of cranial diagnosis, as developed by Mrs. French, may perhaps have more faith in it, now that it has been *adopted*, not *discovered*, by a great English scientist."—*Sunday Republic, Philadelphia.*

"In this startling treatise the lady proclaims that not only has she practised, but that she teaches, the science of diagnosing disease through the brain. The lady's claims are no bolder than she seems prepared to substantiate; and just now comes the announcement that Dr. Ferrier, of King's College, London, England, is about to make public his experiments on the same subject. The lady has won the emoluments of fame by her early penetration, and whilst Dr. Ferrier stands at the portal of discovery, Dr. French has almost perfected a grand science. If this be charlatanism and humbuggery, let us seek to expose it by stern and rigorous investigation, but until then let her who has won wear the laurels."—*Garrett County Gazette, Maryland.*

"Professor French in her new work gives a very full account of her great discovery respecting electrical cranial diagnosis and the scientific application of nine different currents of electricity to the cure of disease. It gives a thorough system of hygiene, and one of the most consistent we ever read. However much may be said against her electrical panacea as an hallucination or otherwise, she has wrought wonderful cures in chronic and physician-abandoned cases. Happily, there is no check of potency to the progress of science."—*Ohio Farmer.*
